Professional Computer Support and Services

JANUARY 2011 NEWSLETTER

## Current News

January 2011

Happy New Year,  
First off, I want to apologize that this newsletter is 4 months late. Everyone should be well on their way on accomplishing their goals they have set for 2011. If not, it's not too late to start. One of my goals for 2011 is to walk around the businesses near my office and introduce myself to the small business owners and hopefully set up an appointment to discuss how or who we know that can benefit from our services, and build a business relationship.

### Featured Service

#### Website design and development.

Scallycomputechs provides affordable website design, development, and maintenance services. If you know someone who is starting a business, have them give us a call. So that we can help them get their online marketing strategy.

### Services We Provide

- Managed Service (monthly computer checkups)
- IT Policies
- Disaster Prevention
- Virus and Spyware removal
- Hard drive data erase

#### Scallycomputechs

148 E. Third Avenue, Suite 201.

San Mateo, California 94401.

Phone (650) 347-7500

FAX (650) 347-7600

## Tip of the Month

### 10 Ways to tune up your PC

Everything needs a tune up: cars, piano's even computers. Here are 10 ways you can tune up your PC to help keep it running smoothly and efficiently.

#### 9) Defrag your hard drive

Over time, files on your computer are moved around the hard drive. Eventually it takes your computer longer to find various parts of the programs which have been moved or fragmented. To boost your computer's speed and overall performance defrag your hard drive on occasion. In Windows 7, **Disk Defragmenter** rearranges fragmented data, making your computer operate more efficiently.

Look for step 10 next month, If you would like to read the entire document go to my website <http://www.scallycomputechs.com>

#### Term: Spyware

Spyware is software that transmits personally identifiable information from your computer to some place in the internet without your knowledge. Spyware is typically not the product you install itself, but small add-ons, that you may or may not disable during install. In most cases, the EULA somewhere has a few lines telling you about privacy matters, but typically most users don't read the complete EULA and never know they have spyware on their system.
