

Scallycomputechs

Professional Computer Support and Services

SEPTEMBER 2010 NEWSLETTER

Current News

September 2010

Scallycomputechs has partnered with Stovall Organizing. The joint service we will be providing is IT Policies. Every small business that has 1 or more employee's should have IT use policies in place. Policies will provide a structured guide line for your employees' Internet and email use. As well as Phone and texting usage. You want your employee's to be productive, but also allow the freedom to surf the Internet and check personal emails and phone calls. IT policies provide a structured guide line for this benefit.

Featured Service

Virus Removal:

One of the services we provide for home users and small businesses is virus removal. This can be as easy as a 1 hour service or it could be as severe as having to reformat your hard drive and reinstalling the operating system, and all your programs. Then restoring all your data from backup, you are backing up right? If not contact us regarding our Disaster Prevention service

Services We Provide

- Disaster Prevention
- Website design
- Wireless network support
- Managed Service (monthly computer checkups)
- Desktop computer sales

Tip of the Month

10 Ways to tune up your PC

Everything needs a tune up: cars, piano's even computers. Here are 10 ways you can tune up your PC to help keep it running smoothly and efficiently.

5) CPU Utilization

Your Central Processing Unit (CPU) is the brains of your computer. It organizes the processes in your computer to help keep it running smoothly. If you're wondering if an application may be slowing down your system, you can check the performance tab in Windows Task Manager to see if the online movie you are watching is taking more than its fair share of power. Windows task manager provides details on each program running on your computer, allowing you to find those programs affecting your PC's efficiency.

Term: Default Gateway

In home computing configurations, an ISP often provides a physical device which both connects local hardware to the Internet and serves as a gateway. Such devices include DSL modems and Cable modems.

In organizational systems a gateway is a node that routes the traffic from a workstation to another network segment. The default gateway commonly connects the internal networks and the outside network (Internet). In such a situation, the gateway node could also act as a proxy server and a firewall. In other words, a default gateway provides an entry point and an exit point in to a network.
